DETAILED ACTION

Applicant's remarks accompanying the response filed on October 22, 003 have been considered and are well taken. The objections and rejections set forth in the previous Office action are withdrawn. Claims 1-23 remain pending.

Claims 12-22 stand withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 6.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 23 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 4, 5, 7 and 8 of U.S. Patent No. 6,637,572 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because each of the claims is readable on the embodiment

shown both in Figure 5 of the present application and the embodiment shown in Figure 5 of the patent. Claim 23 of the present application is merely a broader recitation of the device set forth in the above mentioned claims of the patent in that claim 23 does not require the pressure part of the armature specified in claim 1 of the patent. The location of the armatures relative to the respective coils would have been obvious to one of ordinary skill in the art in view of the limitations recited in any one of the dependent claims 4, 5, 7 and/or 8 of the patent.
